Core Competencies: Java 17 | Spring Boot | Microservices | Kafka | AWS | Kubernetes | REST APIs | SQL | CI/CD |
Payments

PROFESSIONAL SUMMARY

Java Backend Developer specializing in payments and transaction systems, with 4 years building high-throughput, distributed microservices for Travelport, a global travel-tech platform serving 70,000+ agencies. Deep hands-on ownership of revenue-critical payment systems processing 500K+ transactions per day at 99.95% uptime, with expertise in Java 17, Spring Boot, REST APIs, Kafka-driven event architectures, IBM MQ, DB2, MongoDB, and AWS-based deployment. Skilled in container orchestration and distributed-systems design with Docker, Kubernetes, and Amazon EKS. Delivered 50-70% performance gains, mentored junior engineers, and shipped 25+ zero-downtime production releases via CI/CD on OpenShift and Docker.

TECHNICAL SKILLS

- **Languages:** Java 8, Java 17, Python, C++, SQL, JavaScript
- **Frameworks & Testing:** Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Apache Camel, Resilience4j (Circuit Breaker, Retry/Backoff), JUnit, Mockito
- **Architecture:** Microservices, Distributed Systems, REST APIs, System Design (HLD/LLD), SOLID, Design Patterns, OOP, Multithreading
- **Messaging & Databases:** Apache Kafka, IBM MQ, IBM DB2, MongoDB, MySQL, Oracle
- **Cloud & DevOps:** AWS (S3, CloudWatch, EC2, EKS), Kubernetes, OpenShift, Docker, Jenkins, GitHub Actions, Maven, CI/CD, Apache TomEE
- **Security & APIs:** OAuth 2.0, JWT, Okta, Spring Security, Swagger / OpenAPI, Postman, SOAP
- **AI Tooling (working knowledge):** LLMs, RAG, Agentic AI, Prompt Engineering, GitHub Copilot
- **Tools & Practices:** Git, JIRA, Agile, Scrum, SonarQube, Nexus, Fortify, IntelliJ IDEA, Code Reviews

WORK EXPERIENCE

Tata Consultancy Services | Gurugram, India | Nov 2022 - Present

System Engineer (Java Backend Developer) | Client: Travelport

Ticket Repository Team | Mar 2025 - Present

Java 17 | Spring Boot | MongoDB | AWS S3 & CloudWatch | OpenShift

- Architected a ticket-retrieval microservice serving 200K+ REST requests per day, fetching MongoDB records by PNR and Ticket Number.
- Integrated AWS S3 for log archival and CloudWatch dashboards for live monitoring, reducing issue-detection time by 60%.
- Deployed containerized services on OpenShift using GitHub Actions CI/CD, enabling 15+ zero-downtime releases per month.
- Designed a pluggable response formatter supporting XML, JSON, and EDIFACT, accelerating new-client onboarding by 35% and saving 40 developer-hours per release.

EMD Team (Electronic Miscellaneous Document) | Mar 2025 - Present

Java 17 | Spring | Hibernate | Apache Camel | GitHub Actions

- Migrated the EMD application from Java 8 to Java 17 and Apache Camel 2 to Camel 3, refactoring 40+ Camel routes and removing deprecated APIs with zero production regressions.
- Rebuilt legacy REST integration layer using the native Java HTTP client, boosting API throughput by 70% and saving approximately \$20K per year in infrastructure costs.
- Delivered 12 core EMD features for ancillary products (seats, meals, lounges), enhancing customer experience across 10+ airline carriers.
- Unified Payments, PNR, TSR Billing, IATA, and airline system integrations via Apache Camel routes, improving cross-system reliability by 35%.
- Shipped production hotfixes under 4-hour SLAs, sustaining 99.9% availability on revenue-critical EMD services.

Payments Team | Jan 2023 - Mar 2025

Java 17 | Spring Boot | DB2 | IBM MQ | Apache TomEE 9 | Jenkins | Docker

- Led migration of payment microservices from Java 8 to Java 17 and TomEE 8 to TomEE 9, lifting throughput by 50% and cutting memory usage by 30%.
- Developed payment REST APIs processing 500K+ daily transactions across 15 GDS integrations with 99.95% uptime and zero customer-impacting outages in 2024.
- Reduced average API latency by 40% (850ms to 510ms) by tuning DB2 queries, adding connection pooling, and implementing caching strategies.
- Implemented OAuth 2.0 and JWT-based authentication with Spring Security across payment endpoints, and secured code delivery using Fortify static-analysis scans in CI.
- Authored JUnit and Mockito unit and integration test suites for payment services, raising test coverage from 33% to 70% ahead of 25+ zero-downtime releases.
- Resolved 30+ critical production incidents as on-call engineer, improving mean-time-to-recovery by 45% through structured root-cause analysis and runbooks.
- Mentored 5 junior developers and conducted 100+ code reviews, raising SonarQube code-quality score by 25% across the payments codebase.
- Operated within an Agile/Scrum delivery model across sprint planning, backlog grooming, and story-point estimation, sustaining a consistent 2-week release cadence over 25+ production deployments.
- Adopted GitHub Copilot across the payments codebase for AI-assisted development, accelerating boilerplate and test-case generation and shortening code-review turnaround.

KEY ACHIEVEMENTS

- **Star Performer Award, TCS (2024):** Recognized for delivering the Payments Java 17 migration 2 weeks ahead of schedule with zero production defects.
- **On-The-Spot Award, TCS (2023):** Received for resolving a P1 payment outage in under 90 minutes, preventing approximately \$50K in revenue loss.
- **Top 15% on LeetCode:** Solved 1,000+ problems with a 3+ year daily coding streak and weekly global contest rankings, demonstrating strong DSA fundamentals for system design and coding interviews.

CERTIFICATIONS

- GitHub Copilot Certification, Microsoft (2026)
learn.microsoft.com/en-us/users/amankumar-9595/credentials/a79d25ba280f9b2a
- Claude Certified Developer - Foundations, Anthropic
credly.com/badges/120b5996-b444-4c37-868c-cc779314f811

PROJECTS

Containerized Microservice Deployment on Amazon EKS | Docker, Kubernetes, AWS EKS, Spring Boot

- Containerized a Spring Boot REST service with Docker and provisioned an Amazon EKS cluster to deploy and manage it using Kubernetes.
- Configured core Kubernetes objects (Deployments, Services, and ConfigMaps) to handle application scaling and configuration management.
- Gained hands-on experience with pod scheduling, rolling updates, and cluster troubleshooting using kubectl, building a foundation for production-grade container orchestration.

Knowledge Retrieval Tool | RAG, Hybrid Search, Confluence/Jira Integration

- Built a RAG-based knowledge retrieval tool over Confluence and Jira, with ticket-status lookup and severity-based prioritization, cutting manual search time across teams.

EDUCATION

B.Tech, Computer Science & Engineering | Aug 2018 - Jul 2022

JP Mukand Lal Innovative Engineering & Technology Institute, Haryana, India | CGPA: 8.75 / 10
